## Michigan Bulb Propagating Co.

"Largest Growers of Dutch Bulbs in America"

Established 1914

Bell Phone So. 1170 W.

R. F. D. No. **B**  
Grand Rapids, Michigan

*Michigan Bulb Co.*

## "TO OUR CUSTOMERS"

Tulips, Hyacinths, etc., were first raised and commercialized by the Dutch, who imported them from the Caucasus. For many years it was the general belief that these (so-called Dutch bulbs) would not grow in any other country but Holland. Experiments of later years, however, has proven this belief to be quite erroneous. Tulips, Hyacinths, etc., are now being produced in this country with just as good results as those grown in the Netherlands. The flowers of those bulbs grown here have more brilliant hues and are of longer life than those imported from the Netherlands.

Recently we shipped a large quantity of Michigan grown bulbs to the Department of Agriculture at Washington, D. C., and we are in receipt of a letter that the flowers of those bulbs made a very good showing.

The Michigan Bulb Propagating Co. stands out as being the pioneer organization in the bulb industry in America. Every year we add to our already extensive list new varieties and so this year we have listed in our Catalogue some new varieties which we believe will prove just as popular as those we have already offered in the past.

"All bulbs" printed below are "well" adapted for "outdoor culture" but the varieties that have proven to us to be "well adapted for indoor culture" we have marked G. F. I.

**NOTICE**—When ordering bulbs please order by Catalogue Number only.

Directions for planting are sent with each shipment of bulbs. Fall bulbs should be planted in the fall, but to insure early and prompt delivery, orders should be sent as soon as possible.

G. F. I. Means Good for Indoor.

### SELECTED HYACINTHS FOR INDOOR AND OUTDOOR CULTURE SINGLE HYACINTHS

No.		Per Doz.	Per 100
